Data Revocation on the Internet Jun 25 2019 After publishing data on the Internet, the data publisher loses control over it. However, there are several situations where it is desirable to revoke published information. To support this, the European Commission has elaborated the General Data Protection Regulation (GDPR). In particular, this regulation requires that controllers must delete data on user's demand. However, the data might already have been copied by third parties. Therefore, Article 17 of the GDPR includes the regulation that a controller must also inform all affected third parties about revocation requests. Hence, the controllers would need to track every access, which is hard to achieve. This technical infeasibility is a gap between the legislation and the current technical possibilities. To close it, we provide a distributed and decentralized Internet-wide data revocation service (DRS), which is based on the combination of the technical mechanisms and the obligation to follow the legal regulations. With the DRS, the user can notify automatically and

simultaneously all affected controllers about her revocation request. Thus, we implicitly provide the notification of third parties about the user's request.

HCV: The Journey from Discovery to a Cure Aug 27 2019
Hepatitis C is a liver disease caused by the hepatitis C virus (HCV) and infects approximately 75 million individuals worldwide. It is also one of the major causes of liver cancer and liver transplants. The elucidation of the HCV genome, and the development of a whole cell system to study the virus spurred the search for novel direct acting antiviral drugs to cure this disease. This global effort culminated in the development of direct acting antiviral drugs that led to cure rates approaching 100% in all patient populations after only 8-12 weeks of therapy. These efforts resulted in one of the greatest achievements in public health and provides the potential for eliminating HCV as a major disease worldwide.

This volume is aimed at a broad audience of academic and industrial scientists interested in the discovery and development of drugs to treat viral diseases and those interested in reading about one of the most unique accomplishments in biomedical research. The volume will provide a one of a kind reference work that highlights the many efforts, from the discovery of the HCV virus, to the invention of breakthrough medicines and their use in the real world to cure patients. It is the companion book to the volume "HCV: The Journey from Discovery to a Cure - Volume II".

Identity-based Cryptography Oct 10 2020 "What if your public key was not some random-looking bit string, but simply your name or email address? This idea, put forward by Adi Shamir back in 1984, still keeps cryptographers busy today. Some

cryptographic primitives, like signatures, were easily adapted to this new "identity-based" setting, but for others, including encryption, it was not until recently that the first practical solutions were found. The advent of pairings to cryptography caused a boom in the current state-of-the-art is this active subfield from the mathematical background of pairing and the main cryptographic constructions to software and hardware implementation issues. This volume bundles fourteen contributed chapters written by experts in the field, and is suitable for a wide audience of scientists, grad students, and implementors alike." --Book Jacket.
