*Handley Page Victor - Volume 2*  
Aug 24 2019 The first volume of Roger Brooks detailed reference to the Victor covers the conception, design and test-flying of the prototype HP 80 and then the production and operation of the Mark 1 in its many roles. This second volume completes the history of the aircraft by describing the improved Mark 2 that was primarily conceived to carry Britains Blue Steel nuclear deterrent. The aircraft was to be re-engined with the Rolls-Royce Conway and the enlargement of the air intakes in the wing are one of the more noticeable external differences on these models. When the V-

Bomber Force lost its primary raison detre as the delivery vehicle for the nuclear deterrent, the Victors were adapted for the air-to-air refueling tanker role, a task they successfully carried out until their airframe life was exhausted. This volume also includes lengthy appendices on all Marks that include a mass of detailed historical information, the testing of many new systems, modifications throughout service life, the authors first-hand experiences as a Victor crew chief, operational records and a complete list of all Victor accidents with a detailed analysis and official reports.

*Cars 1950-1969* Oct 31 2022  
American road racing began just after World War II and quickly blossomed into a movement. The Sports Car Club of America (SCCA) and the United States Auto Club (USAC), clubs that became fierce rivals in the 1950s and 1960s, were the principal race promoters. Race tracks popped up everywhere, at first on city streets, then at airports and U.S. Air Force bases, and finally at purpose-built circuits like Road America and Laguna Seca. Although most of the cars that competed in American road racing were built in Europe, an underground movement sprang up of "special builders" who constructed their racers in home garages and small-town machine shops. Some were so homely and slow that only the builders could love them. Others trounced every Ferrari in sight and are now on the wish lists of wealthy collectors the world over. *Vintage American Road Racing Cars 1950-1970* is the first book devoted exclusively to

American road racing cars of all types and sizes. Hundreds of race cars built in America have never before been mentioned in print, and this book chronicles those and other cars with vintage and modern photography, specifications, memorabilia, and the stories and characters behind each car. About the Author Harold Pace's writing and photography has appeared in such magazines as *Automobile Quarterly*, *Class & Sportscar*, *Excellence*, *Sports Car International*, *Vintage Racecar Journal*, and others. He lives in Weatherford, Texas. Mark Brinker is a vintage race car enthusiast who has raced at the Monterey Historics. He is a doctor with three published medical textbooks and 70+ published scientific papers. He hails from Houston, Texas.

operation of British tanks since 1945. Fewer types of tank were built than during the wartime period, but the complexity of design and manufacture increased, and a level of technical sophistication in the key areas of armor, firepower and mobility was beyond the imaginings of the tank pioneers of the First World War. Using a selection of contemporary photographs supported by some modern photographs of preserved vehicles Pat Ware sets the modern tank in a historical context. He describes its origins in Britain and its development and deployment in the Second World War and in the post-war period. All the British tanks that have seen service since the war are depicted, among them the Conqueror, Chieftain, Centurion and Challenger. The engineers tanks the flails, recovery vehicles, bridge-layers are featured, as are the less-well-known British tanks made for export. This highly illustrated survey gives a fascinating insight into the recent evolution of the British

tank and its role in the postwar world. Pat Ware is a leading expert on the history of military vehicles and a prolific writer of books and articles on every aspect of the subject. His most recent publications include a study of the military Jeep and encyclopaedias of military vehicles and motorcycles. He was the founding editor of Classic Military Vehicle magazine in 2001 and continues to contribute to the magazine as well as writing a military column for Land Rover World. **THEIR LAST PATH** Feb 29 2020

published - the first ever book about test flying this monumental delta-wing aircraft which dominated the history of the late 20th century. Tony is the ideal man to write such a tale as he flew no less than 105 of the 136 built, logging 850 flights at over 1,327 hours. His book will describe in layman's terms what it was like to tame the first prototypes and to master the unusual characteristics necessitated by the Vulcan's shape. Although Tony puts the developments, demonstrations, incidents and accidents in their political and historical context, his story is a highly personal one. He explains how this awesome aircraft became a national treasure and captured the imagination of the whole country. His words, descriptions and hitherto largely unpublished photographs will make people feel as he did the excitement of handling such an incredibly powerful monster always in the knowledge that he had to be in complete charge all the time as the monster could and did bite

**The Centurion Tank** Mar 12 2021 Few tank designs have been as effective, versatile and long-lived as that of the British Centurion. Conceived during the Second World War as the answer to the superior German Tiger and Panther tanks and to the lethal 88mm gun, this 52-

ton main battle tank incorporated the lessons British designers had learned about armored fighting vehicles during the conflict, and it was free of the major faults that had impaired the other British tank designs of the time. The Centurion was so successful that it served in the British Army and in numerous other armies across the world from 1945 until the 1990s. Pat Wares highly illustrated history of this remarkable tank covers its design and development, its technical specifications and the many variants that were produced. He tells the story from the design brief of 1943, through testing and trials to the tanks entry into service. In addition, he traces the course of the Centurions subsequent career, as it was up-dated, up-gunned and adapted to operate in varied conditions and conflicts all over the world including Korea, the Indo-Pakistan wars, Vietnam and the Arab-Israeli wars. His expert account of this remarkable fighting vehicle is accompanied by a series of color plates
