Sustainable Catalysis for Biorefineries Feb 08 2021 Biorefineries are becoming increasingly important in providing sustainable routes for chemical industry processes. The establishment of bio-economic models, based on biorefineries for the creation of innovative products with high added value, such as biochemicals and bioplastics, allows the development of "green chemistry" methods in synergy with traditional chemistry. This reduces the heavy dependence on imports and assists the development of economically and environmentally sustainable production processes, that accommodate the huge investments, research and innovation efforts. This book explores the most effective or promising catalytic processes for the conversion of biobased components into high added value products, as platform chemicals and intermediates. With a focus on heterogeneous catalysis, this book is ideal for researchers working in catalysis and in green chemistry.

Remembering Victoria Jul 21 2019 On October 15, 1983, a young mother of six was murdered while walking across her village of Huitzilán de Serdán, Mexico, with her infant son and one of her daughters. This woman, Victoria Bonilla, was among more than one hundred villagers who perished in violence that broke out in 1978 soon after the Mexican army chopped down a cornfield that had been planted on an unused cattle pasture by forty Nahuatl villagers. In this anthropological account, based on years of fieldwork in Huitzilán, James M. Taggart turns to Victoria's husband, Nacho Angel Hernández, to try to understand how a community based on respect and cooperation descended into horrific violence and fratricide. When the army chopped down the cornfield at Talcuaco, the war that broke out resulted in the complete breakdown of the social and moral order of the community. At its heart, this is a tragic love story, chronicling Nacho's feelings for Victoria spanning their courtship, marriage, family life, and her death. Nacho delivered his testimonio to the author in Nahuatl, making it one of the few autobiographical love stories told in an Amerindian language, and a very rare account of love among the indigenous people of Mesoamerica. There is almost nothing in the literature on how a man develops and changes his feelings for his wife over his lifetime. This study contributes to the anthropology of emotion by focusing on how the Nahuatl attempt to express love through language and ritual.

Chemistry of the Upper and Lower Atmosphere Jul 13 2021 Here is the most comprehensive and up-to-date treatment of one of the hottest areas of chemical research. The treatment of fundamental kinetics and photochemistry will be highly useful to chemistry students and their instructors at the graduate level, as well as postdoctoral fellows entering this new, exciting, and well-funded field with a Ph.D. in a related discipline (e.g., analytical, organic, or physical chemistry, chemical physics, etc.). Chemistry of the Upper and Lower Atmosphere provides postgraduate researchers and teachers with a uniquely detailed, comprehensive, and authoritative resource. The text bridges the "gap" between the fundamental chemistry of the earth's atmosphere and "real world" examples of its application to the development of sound scientific risk assessments and associated risk management control strategies for both tropospheric and stratospheric pollutants. Serves as a graduate textbook and "must have" reference for all atmospheric scientists Provides more than 5000 references to the literature through the end of 1998 Presents tables of new actinic flux data for the troposphere and stratosphere (0-40km) Summarizes kinetic and photochemical data for the troposphere and stratosphere Features problems at the end of most chapters to enhance the book's use in teaching Includes applications of the OZIPR box model with comprehensive chemistry for student use

High-resolution NMR Techniques in Organic Chemistry Mar 29 2020 From the initial observation of proton magnetic resonance in water and in paraffin, the discipline of nuclear magnetic resonance has seen unparalleled growth as an analytical method. Modern NMR spectroscopy is a highly developed, yet still evolving, subject which finds application in chemistry, biology, medicine, materials science and geology. In this book, emphasis is on the more recently developed methods of solution-state NMR applicable to chemical research, which are chosen for their wide applicability and robustness. These have, in many cases, already become established techniques in NMR laboratories, in both academic and industrial establishments. A considerable amount of information and guidance is given on the implementation and execution of the techniques described in this book.

The Chemical Promise Jan 27 2020 There are some who would question the need to republish papers that have already appeared elsewhere. Walter Paeuél once said that scholars should think in terms of books rather than research papers since the latter become lost in the literature. When he told me this year ago I was not entirely convinced. Surely the young scholar must publish papers to secure his academic position. In addition, throughout his career he attends conferences many of which will require the publication of his papers in the resultant conference volumes. By their very nature such papers often discuss topics in greater detail than that scholar's subsequent books. In this case also the papers tend to become "lost" even when there exist extensive guides to the literature such as the Critical Bibliography published annually in *Isis* for historians of science. Many of my own papers over the past forty-five years have indeed appeared in such conference volumes as in journals.

General Chemistry Mar 09 2021 "General Chemistry: Atoms First," Second Edition starts from the building blocks of chemistry, the atom, allowing the authors to tell a cohesive story that progresses logically through molecules and compounds to help students intuitively follow complex concepts more logically. This unified thread of ideas helps students build a better foundation and ultimately gain a deeper understanding of chemical concepts. Students can more easily understand the microscopic-to-macroscopic connections between unobservable atoms and the observable behavior of matter in daily life, and are brought immediately into real chemistry instead of being forced to memorize facts. Reflecting a true atoms first perspective, the Second Edition features experienced atoms-first authors, incorporates recommendations from a panel of atoms-first experts, and follows historical beliefs in teaching chemistry concepts based on real experimental data first. This approach distinguishes this text in the market based on where other authors teach theory first, followed by experimental data.

Integrated Physics and Chemistry, Chapter 9, Text Feb 20 2022 Key topics: keeping time, calendar, sundials, hourglasses, clocks, navigation, sound, frequency, pitch, sound recording, Doppler shift, earthquake waves, radio, amplifying signals, semiconductors, transistors, parallel circuits) IPC consists of twelve chapters of text and twelve companion student activity books. This course introduces students to the people, places and principles of physics and chemistry. It is written by internationally respected scientist/author, John Hudson Tiner, who applies the vignette approach which effectively draws readers into the text and holds attention. The author and editors have deliberately avoided complex mathematical equations in order to entice students into high school level science. Focus is on the people who contributed to development of the Periodic Table of the Elements. Students learn to read and apply the Table while gaining insight into basic chemistry and physics. This is one of our most popular courses among high school students, especially those who have a history of under-performance in science courses due to poor mathematical and reading comprehension skills. The course is designed for two high school transcript credits. Teachers may require students to complete all twelve chapters for two transcript credits or may select only six chapters to be completed for one transcript credit for Physical Science, Physics, or Chemistry. Compliance with state and local academic essential elements should be considered when specific chapters are selected by teachers. As applicable to local policies, transcript credit may be assigned as follows when students complete all 12 chapters: Physical Science for one credit and Chemistry for one credit, or Integrated Physics and Chemistry for two credits. (May require supplemental local classes/labs.)

Intensification of Biobased Processes May 31 2020 In recent years bioprocessing has increased in popularity and importance, however, bioprocessing still poses various important techno-economic and environmental challenges, such as product yields, excessive energy consumption for separations in highly watery systems, batch operation or the downstream processing bottlenecks in the production of biopharmaceutical products. Many of those challenges can be addressed by application of different process intensification technologies discussed in the present book. The first book dedicated entirely to this area, Intensification of Biobased Processes provides a comprehensive overview of modern process intensification technologies used in bioprocessing. The book focusses on four different categories of biobased products: bio-fuels and platform chemicals; cosmeceuticals; food products; and polymers and advanced materials. It will cover various intensification aspects of the processes concerned, including (bio)reactor intensification; intensification of separation, recovery and formulation operations; and process integration. This is an invaluable source of information for researchers and industrialists working in chemical engineering, biotechnology and process engineering.

Let the People In Sep 15 2021 This intimate biography of the pioneering Texas governor is "required reading for political junkies—and for women considering a life in politics" (Booklist). When Ann Richards delivered the keynote of the 1988 Democratic National Convention and mocked President Bush—"Poor George, he can't help it. He was born with a silver foot in his mouth"—she became an instant celebrity and triggered a rivalry that would alter the course of history. In 1990, she won the governorship of Texas, becoming the first ardent feminist elected to high office in America. Richards opened pathways for greater diversity in public service, and her achievements created a legacy that transcends her tenure in office. In *Let the People In*, Jan Reid offers an intimate portrait of Ann Richards's remarkable rise to power as a liberal Democrat in a deeply conservative state. Reid draws on his long friendship with Richards, as well as interviews with family, personal correspondence, and extensive research to tell the story of Richards's life, from her youth in Waco, through marriage and motherhood, her struggle with alcoholism, and her shocking encounters with Lyndon Johnson and Jimmy Carter. Reid shares the inside story of Richards's rise from county office to the governorship, as well as her score-settling loss of the governorship to George W. Bush. Reid also describes Richards's final years as a mentor to a new generation of public servants, including Hillary Clinton.

Enological Chemistry Apr 22 2022 Enological Chemistry is written for the professional enologist tasked with finding the right balance of compounds to create or improve wine products. Related titles lack the appropriate focus for this audience, according to reviewers, failing either to be as comprehensive on the topic of chemistry, to include chemistry as part of the broader science of wine, or targeting a less scientific audience and including social and historical information not directly pertinent to the understanding of the role of chemistry in successful wine production. The topics in the book have been sequenced identically with the steps of the winemaking process. Thus, the book describes the most salient compounds involved in each vinification process, their properties and their balance; also, theoretical knowledge is matched with its practical application. The primary aim is to enable the reader to identify the specific compounds behind enological properties and processes, their chemical balance and their influence on the analytical and sensory quality of wine, as well as the physical, chemical and microbiological factors that affect their evolution during the winemaking process. Organized according to the winemaking process, guiding reader clearly to application of knowledge Describes the most salient compounds involved in each step enabling readers to identify the specific compounds behind properties and processes and effectively work with them Provides both theoretical knowledge and practical application providing a strong starting point for further research and development

Argumentation in Chemistry Education Sep 27 2022 Many studies have highlighted the importance of discourse in scientific understanding. Argumentation is a form of scientific discourse that plays a central role in the building of explanations, models and theories. Scientists use arguments to relate the evidence that they select from their investigations and to justify the claims that they make about their observations. The implication is that argumentation is a scientific habit of mind that needs to be appropriated by students and explicitly taught through suitable instruction. Edited by Sibel Erduran, an internationally recognised expert in chemistry education, this book brings together leading researchers to draw attention to research, policy and practice around the inclusion of argumentation in chemistry education. Split into three sections: Research on Argumentation in Chemistry Education, Resources and Strategies on Argumentation in Chemistry Education, and Argumentation in Context, this book blends practical resources and strategies with research-based evidence. The book contains state of the art research and offers educators a balanced perspective on the theory and practice of argumentation in chemistry education.

Cognitive Styles in Law Schools Nov 05 2020 People differ in their cognitive styles—their ways of getting and using information to solve problems and make decisions. Alfred G. Smith and his associates studied these differences in a selected group of over 800 students at a score of law schools throughout the United States. Two major cognitive styles were identified: that of the monopath, who follows a single route of established principles and procedures, and that of the polypath, who takes many routes, as circumstances suggest. A battery of both original and standard tests was administered to both law students and their professors to investigate differences in cognitive style and their relationships to self-image, anxiety, and academic achievement. This also revealed differences in prevailing styles at different schools. The results will be of special interest to readers concerned with legal education, to psychologists, and to behavioral scientists. The research format developed here will serve equally well for raising significant questions about the professions of medicine, education, social work, and others in which cognitive and communication styles play a central role in determining outcomes.

Biological Inorganic Chemistry Sep 03 2020 The importance of metals in biology, the environment and medicine has become increasingly evident over the last twenty five years. The study of the multiple roles of metal ions in biological systems, the rapidly expanding interface between inorganic chemistry and biology constitutes the subject called Biological Inorganic Chemistry. The present text, written by a biochemist, with a long career experience in the field (particularly iron and copper) presents an introduction to this exciting and dynamic field. The book begins with introductory chapters, which together constitute an overview of the concepts, both chemical and biological, which are required to equip the reader for the detailed analysis which follows. Pathways of metal assimilation, storage and transport, as well as metal homeostasis are dealt with next. Thereafter, individual chapters discuss the roles of sodium and potassium, magnesium, calcium, zinc, iron, copper, nickel and cobalt, manganese, and finally molybdenum, vanadium, tungsten and chromium. The final three chapters provide a tantalising view of the roles of metals in brain function, biomineralization and a brief illustration of their importance in both medicine and the environment. Relaxed and agreeable writing style. The reader will not only find the book easy to read, the fascinating anecdotes and footnotes will give him pegs to hang important ideas on. Written by a biochemist. Will enable the reader to more readily grasp the biological and clinical relevance of the subject. Many colour illustrations. Enables easier visualization of molecular mechanisms Written by a single author. Ensures homogeneity of style and effective cross referencing between chapters
