How People Learn May 05 2020 First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the

influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

How Children Learn Dec 12 2020 From the preface by Deborah Meier: "We have a long way to go to make John Holt's dream available to all children. But his books make it possible and easier for many of us to join him in the journey." In this enduring classic, rich with deep, original insight into the nature of early learning, John Holt was the first to make clear that, for small children, "learning is as natural as breathing." In his delightful book he observes how children actually learn to talk, to read, to count, and to reason, and how, as adults, we can best encourage these natural abilities in our children.

Core Curriculum Development Mar 03 2020 This bulletin brings together from several sources information on the "what" and the "how" of core curriculum practice. Many articles and brochures are in print describing aspects of the core in individual schools and school systems. Information about characteristics of the core curriculum is readily available in the literature. No comprehensive study has been made, however, to discover to what extent several of the commonly discussed characteristics actually are found in practice. Accordingly it was thought that the Office of Education could make a contribution through presenting the results of a survey of practice, with illustrations of

how it is done gathered from widely scattered schools. In general, then, this bulletin attempts to answer two questions. 1. "What is the core program like as it is being developed in the secondary schools of the United States?"--A study of status by the Office of Education in 1949 reported on 545 public high schools of an estimated 833 which a Nation-wide sampling survey revealed were using core-type programs. The questionnaire used asked for information about subjects included, time allotted, grades in which utilized, and number of pupils enrolled. After the completion of the 1949 study, another questionnaire was prepared to obtain information about the nature of the core curriculum and the extent to which certain features, generally recognized as being characteristics of core programs, are actually found in practice. 2. "How have high schools which have achieved fairly successful core programs attacked the problems which principals report as major concerns?"--Illustrations of practice obtained during visits to selected schools, through correspondence, or from the literature are provided. These illustrations cover teacher preparation and in-service education, scheduling to provide conference periods, materials and equipment in the classroom, provision of resource units, introducing teacher-pupil planning in the core class, establishing sound public and staff relationships, and evaluating the outcomes of core programs. This bulletin consists of two parts: Part I, a report of status and practice as revealed by the questionnaire, by visits, through a survey of the literature, and through correspondence, covers the extent of the use of different types of programs--those which are true core and those which are variations or core-type in nature. It considers the extent to which certain characteristics, such as heterogeneous grouping, extraclass activities, homeroom and guidance, and use of a single mark for "core," are found in practice. It deals with other matters of status, such as geographic areas of development, grades in which it is found, and total or partial enrollment of pupils within a given grade. Finally, it describes core class

procedures in several actual situations. Part II first enumerates the problems which high-school principals reported on the questionnaire as being the chief roadblocks in the operation or further enrichment of their core programs, then gives information about the extent of those problems for which the questionnaire gathered data, and, finally, attempts to show how some forward-looking high schools are tackling the major problems. Appended is the inquiry on the operation of core programs in secondary schools. An index of authors and places is also included. (Contains 4 tables and 59 footnotes.) [Best copy available has been provided.]

Connecting Abstract Algebra to Secondary Mathematics, for Secondary Mathematics

Teachers Sep 08 2020 Secondary mathematics teachers are frequently required to take a large number of mathematics courses - including advanced mathematics courses such as abstract algebra - as part of their initial teacher preparation program and/or their continuing professional development. The content areas of advanced and secondary mathematics are closely connected. Yet, despite this connection many secondary teachers insist that such advanced mathematics is unrelated to their future professional work in the classroom. This edited volume elaborates on some of the connections between abstract algebra and secondary mathematics, including why and in what ways they may be important for secondary teachers. Notably, the volume disseminates research findings about how secondary teachers engage with, and make sense of, abstract algebra ideas, both in general and in relation to their own teaching, as well as offers itself as a place to share practical ideas and resources for secondary mathematics teacher preparation and professional development. Contributors to the book are scholars who have both experience in the mathematical preparation of secondary teachers, especially in relation to abstract algebra, as well as those who have engaged in related educational research. The volume addresses some of the persistent issues in secondary

mathematics teacher education in connection to advanced mathematics courses, as well as situates and conceptualizes different ways in which abstract algebra might be influential for teachers of algebra. *Connecting Abstract Algebra to Secondary Mathematics, for Secondary Mathematics Teachers* is a productive resource for mathematics teacher educators who teach capstone courses or content-focused methods courses, as well as for abstract algebra instructors interested in making connections to secondary mathematics.

Classical Spirituality in Contemporary America Jun 25 2019 G.I. Gurdjieff (d. 1949) remains an important, if controversial, figure in early 20th-century Western Esoteric thought. Born in the culturally diverse region of the Caucasus, Gurdjieff traveled in Asia, Africa, and elsewhere in search of practical spiritual knowledge. Though oftentimes allusive, references to Sufi teachings and characters take a prominent position in Gurdjieff's work and writings. Since his death, a discourse on Gurdjieff and Sufism has developed through the contributions as well as critiques of his students and interlocutors. J.G. Bennett began an experimental 'Fourth Way' school in England in the 1970s

which included the introduction of Sufi practices and teachings. In America this discourse has further expanded through the collaboration and engagement of contemporary Sufi teachers. This work does not simply demonstrate the influence of Gurdjieff and his ideas, but approaches the specific discourse on and about Gurdjieff and Sufism in the context of contemporary religious and spiritual teachings, particularly in the United States, and highlights some of the adaptive, boundary-crossing, and hybrid features that have led to the continuing influence of Sufism.

Fulfilling the Promise Dec 24 2021 Why are students today not learning biology, appreciating its importance in their lives, or pursuing it as a career? Experts believe dismal learning experiences in biology classes are causing the vast majority of students to miss information that could help them lead healthier lives and make more intelligent decisions as adults. How can we improve the teaching of biology throughout the school curriculum? Fulfilling the Promise offers a vision of what biology education in our schools could be—along with practical, hard-hitting recommendations on how to

make that vision a reality. Noting that many of their recommended changes will be controversial, the authors explore in detail the major questions that must be answered to bring biology education to an acceptable standard: how elementary, middle, and high-school biology education arrived at its present state; what impediments stand in the way of improving biology education; how to properly prepare biology teachers and encourage their continuing good performance; and what type of leadership is needed to improve biology education.
