[Coast](#) Apr 10 2021 North Carolina possesses one of the longest, most treacherous coastlines in the United States, and the waters off its shores have been the scene of some of the most dramatic episodes of piracy and sea warfare in the nation's history. Now, Lindley Butler brings this fascinating aspect of the state's maritime heritage vividly to life. He offers engaging biographical portraits of some of the most famous pirates, privateers, and naval raiders to ply the Carolina waters. Covering 150 years, from the golden age of piracy in the 1700s to the extraordinary transformation of

2020 Learn how to fill forests with food by viewing agriculture from a remarkably different perspective: that a healthy forest can be maintained while growing a wide range of food, medicinal, and other nontimber products. The practices of forestry and farming are often seen as mutually exclusive, because in the modern world, agriculture involves open fields, straight rows, and machinery to grow crops, while forests are reserved primarily for timber and firewood harvesting. In *Farming the Woods*, authors Ken Mudge and Steve Gabriel demonstrate that it doesn't have to be

an either-or scenario, but a complementary one; forest farms can be most productive in places where the plow is not: on steep slopes and in shallow soils. Forest farming is an invaluable practice to integrate into any farm or homestead, especially as the need for unique value-added products and supplemental income becomes increasingly important for farmers. Many of the daily indulgences we take for granted, such as coffee, chocolate, and many tropical fruits, all originate in forest ecosystems. But few know that such abundance is also

available in the cool temperate forests of North America. *Farming the Woods* covers in detail how to cultivate, harvest, and market high-value nontimber forest crops such as American ginseng, shiitake mushrooms, ramps (wild leeks), maple syrup, fruit and nut trees, ornamentals, and more. Along with profiles of forest farmers from around the country, readers are also provided comprehensive information on: • historical perspectives of forest farming; • mimicking the forest in a changing climate; • cultivation of medicinal crops; • cultivation of food crops; • creating a

forest nursery; • harvesting and utilizing wood products; • the role of animals in the forest farm; and, • how to design your forest farm and manage it once it's established.

Farming the Woods is an essential book for farmers and gardeners who have access to an established woodland, are looking for productive ways to manage it, and are interested in incorporating aspects of agroforestry, permaculture, forest gardening, and sustainable woodlot management into the concept of a whole-farm organism.

groundbreaking examination of the role that wood and trees have played in our global ecosystem—including human evolution and the rise and fall of empires—in the bestselling tradition of Yuval Harari's *Sapiens* and Mark Kurlansky's *Salt*. As the dominant species on Earth, humans have made astonishing progress since our ancestors came down from the trees. But how did the descendants of small primates manage to walk upright, become top predators, and populate the world? How were humans able to develop civilizations and produce a globalized economy? Now, in *The Age of Wood*,

Roland Ennos shows for the first time that the key to our success has been our relationship with wood. Brilliantly synthesizing recent research with existing knowledge in fields as wide-ranging as primatology, anthropology, archaeology, history, architecture, engineering, and carpentry, Ennos reinterprets human history and shows how our ability to exploit wood's unique properties has profoundly shaped our bodies and minds, societies, and lives. He takes us on a sweeping ten-million-year journey from Southeast Asia and West Africa where great apes

swing among the trees, build nests, and fashion tools; to East Africa where hunter gatherers collected their food; to the structural design of wooden temples in China and Japan; and to Northern England, where archaeologists trace how coal enabled humans to build an industrial world. Addressing the effects of industrialization—including the use of fossil fuels and other energy-intensive materials to replace timber—The Age of Wood not only shows the essential role that trees play in the history and evolution of human existence, but also argues that for the benefit of our planet we must

return to more traditional ways of growing, using, and understanding trees. A winning blend of history and science, this is a fascinating and authoritative work for anyone interested in nature, the environment, and the making of the world as we know it.

Virginia—formerly the USS Merrimack—slowly steamed down the Elizabeth River toward Hampton Roads on March 8, 1862, the tide of naval warfare turned from wooden sailing ships to armored, steam-powered vessels. Little did the ironclad's crew realize that their makeshift warship would achieve the greatest Confederate naval victory. The trip was thought by most of the crew to be a trial cruise. Instead, the Virginia's aggressive commander, Franklin Buchanan, transformed the voyage into a test by fire that forever proved the supreme

Virtually everything about the Virginia's design was an improvisation or an adaptation, characteristic of the Confederacy's efforts to wage a modern war with limited industrial resources. Introduction to Astronomical Photometry Jan 07 2021 The material given in this 'Introduction to astronomical photometry' is the subject matter of a lecture at the University of Geneva. It is, therefore, intended for those students, physicists or mathematicians, who have completed their bachelor's degree or diploma, and are intending to work for their Ph.D. in astronomy. We assume then the elementary ideas of astrophysics, magnitude, colour index, spectral classes, luminosity classes, gradient, atmospheric

The student may find it useful to re-read the work of Schatzman [1], Dufay [2] and Aller [254] before embarking upon the study of this 'Introduction to astronomical photometry'. It is not our aim in this book to deal with every aspect of stellar photometry. On the contrary, we shall restrict ourselves to looking at subjects of which knowledge seems to us essential for someone who has to use photometric quantities in his astronomical research. We are, therefore, keeping the interests of the photometric measurements user particularly in mind. We shall only
