Water-Related Death Investigation May 03 2020 Nearly ten years after the first edition of Water-Related Death Investigation:

Practical Methods and Forensic Applications, water death cases continue to be improperly investigated. The pathologist's report can determine the cause of death as a drowning, but the manner of death is the most challenging to prove. The report will not determine if a victim jumped into the water to commit suicide, fell into the water accidentally, or was pushed in as a homicidal act. Many drowning cases do not reflect injury to the body, so evidence collected at the scene plays a vital role. The importance of an on-scene body assessment cannot be overemphasized. Often, the body evidence begins to change rapidly upon recovery and may not be present during an autopsy. Written statements on the scene are an effective tool to use to determine the accuracy of information given to arriving officers. These statements need to be written by the witnesses themselves as well as the reporting person. The "Show Me" technique can also help reveal discrepancies in a person's version of what occurred as well as aid in providing the most details to an incident as is humanly possible. This second edition includes updated information on the latest technology to assist water death investigators. Parabon Snapshot can help determine the faceless identity of skeletal remains and help locate potential suspects using the science of

It will continue to serve as a valuable resource for the various professionals involved in these cases.

Guide to Hydrothermal Spa Development Standards Jan 11 2021

The Guide to Hydrothermal Spa Development Standards is published by the Global Wellness Institute and was created to provide design and building guidelines for hydrothermal areas (also known as "wet areas") in spas and private residences. Hydrothermal bathing (including saunas, hamams, steam rooms, hydrotherapy pools, etc.), with its benefits of cleansing, detoxifying and improving the immune system, dates back thousands of years and is one of the most ancient spa practices. The goal of this guide is to provide readers - whether they be spa owners, consultants, developers, interior designers, architects, builders, professors, students or anyone embarking on the study or build of a hydrothermal facility - with a consistent and effective means to approach the planning and construction of these unique areas and to avoid common, costly mistakes.
