of cloud infrastructure security. The book highlights the fundamental technology components necessary to build and enable trusted clouds. Here also is an explanation of the security and compliance challenges organizations face as they migrate mission-critical applications to the cloud, and how trusted clouds, that have their integrity rooted in hardware, can address these challenges. This book provides: Use cases and solution reference architectures to enable infrastructure integrity and the creation of trusted pools leveraging Intel Trusted Execution Technology (TXT). Trusted geo-location management in the cloud, enabling workload and data location compliance and boundary control usages in the cloud. OpenStack-based reference architecture of tenant-controlled virtual machine and workload protection in the cloud. A reference design to enable secure hybrid clouds for a cloud bursting use case, providing infrastructure visibility and control to organizations. "A valuable guide to the next generation of cloud security and hardware based root of trust. More than an explanation of the what and how, is the explanation of why. And why you can't afford to ignore it!" —Vince Lubsey, Vice President, Product Development, Virtustream Inc. "Raghu provides a valuable reference for the new 'inside out' approach, where trust in hardware, software, and privileged users is never assumed—but instead measured, attested, and limited according to least privilege principles." —John Skinner, Vice President, HyTrust Inc. Use of SaaS (Software as a Service) as a Cloud Computing Solution Nov 24 2019 Essay from the year 2017 in the subject Computer Science - IT-Security, grade: 9, University of Nairobi, language: English, abstract: Customer satisfaction has been the key competitive strategy of Figura Leisure Centre. However, there is no clear information management system to help them achieve this. Doing the work manually is quite ineffective and time consuming. The organization is losing revenues because of poor management of data and communication system. There is no customer information and follow up on payments by staff is quite a challenge. Proper communication among the staff is also missing. This makes it hard for the staff to respond to customer needs promptly and in the right manner. Customer feedback is also hard to get. Data processing, storage and communication are hard because, if done at all, it is through the conventional approach. This calls for the business to adopt cloud computing's Software as a Service system to enhance communication internally and advance interaction with external customers. SaaS is quite suitable for small business and organizations like Figura Leisure Centre. With the use of SaaS there will be change in the way the organization conducts its business. When used appropriately, SaaS will decrease use of physical infrastructure,
