*Third-Party Funding in International Arbitration* Jun 15 2021 Since the first edition of this invaluable book in 2012, third-party funding has become more mainstream in international arbitration practice. However, since even the existence of a third-party funding agreement in a dispute is often kept secret, it can be difficult to glean the specifics of successful funding agreements. This welcome book, now updated, expertly reveals the nuances of third-party funding in international arbitration, examines the phenomenon in key jurisdictions, and provides a reliable resource for users and potential users that may wish to tap into and make use of this distinctive funding tool. Focusing on Australia, the United Kingdom, the United States, Germany, the Netherlands, Canada, and South Africa, the authors analyze and assess the legal regime based upon legislation, judicial opinions, ethics opinions, and practitioner anecdotes describing the state of third-party funding in each jurisdiction. In addition to updating summaries of the law of the various jurisdictions, the second edition includes a new chapter addressing third-party funding in investor-state arbitration. Among the issues raised and examined are the following: · payment of adverse costs; · "Before-the-Event" (BTE) and "After-the-Event" (ATE) insurance; · attorney financing: pro bono representation, contingency representation, conditional fee arrangements; · loans; · ethical doctrines affecting the third-party funding industry; · possible future bundling, securitization, and trading of legal claims; · risk that the funder may put its own interests ahead of the client's interests; and · whether the existence of a funding agreement must or should be disclosed to the decision maker. The second edition also includes discussion of recent institutional developments as they relate to third-party funding, including the work of the ICCA-Queen Mary Task Force on Third-Party Funding and how third-party funding is being incorporated into arbitral rules and investment treaties. Ably providing a thorough understanding of what third-party funding entails and what legal parameters exist, this book will be of compelling interest to parties aiming to take advantage of the high values, speed, reduced evidentiary costs, outcome predictability, industry expertise, and high award enforceability characteristic of the third-party funding arrangements available in international arbitration.

Reinforcement Learning, second edition Aug 06 2020 The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

Selections new to this edition update the anthology while continuing to present legal theory as a set of closely intertwined arguments. Critical Race Theory is addressed, as are challenges to legal theory posed by the emergence of the European Union. The readings provide superb coverage of both classic and contemporary views, and they are edited only lightly to allow readers to grapple with arguments in their original form. Culver's clear, accessible introductions discuss key terms, claims, issues, connections and points of conflict in each section. Culver takes particular care to place arguments in their historical and social context, with analogies and examples emphasizing the continuing relevance of historical and contemporary arguments.
