Alternative Agriculture: A History Sep 28 2019 People like to believe in a past golden age of traditional English countryside, before large farms, machinery, and the destruction of hedgerows changed the landscape forever. However, that countryside may have looked both more and less familiar than we imagine. Take today's startling yellow fields of rapeseed, seemingly more suited to the landscape of Van Gogh than Constable. They were, in fact, thoroughly familiar to fieldworkers in seventeenth-century England. At the same time, some features that would have gone unremarked in the past now seem like oddities. In the fifteenth century, rabbit warrens were specially guarded to rear rabbits as a luxury food for rich mens tables; whilst houses had moats not only to defend them but to provide a source of fresh fish. In the 1500s we find Catherine of Aragon introducing the concept of a fresh salad to the court of Henry VIII; and in the 1600s, artichoke gardens became a fashion of the gentry in their hope of producing more male heirs. The common tomato, suspected of being poisonous in 1837, was transformed into a household vegetable by the end of the nineteenth century, thanks to cheaper glass-making methods and the resulting increase in glasshouses. In addition to these images of past lives, Joan Thirsk reveals how the forces which drive our current interest in alternative forms of agriculture a glut of meat and cereal crops, changing dietary habits, the needs of medicine have striking parallels with earlier periods in our history. She warns us that today's decisions should not be made in a historical vacuum: we can find solutions to our current problems in the experience of people in the past.

Preoperative Assessment and Perioperative Management Jul 19 2021 Pre operative assessment of the surgical patient is a key part of the perioperative process. However, it is one that cannot be separated from the other aspects of perioperative management, both clinical and administrative, that ensures the safe and effective treatment of surgical patients. There are a number of books on the market that examine perioperative management anaesthesia and surgical nursing that are only able to touch on the pre-operative assessment process. Pre Operative Assessment & Perioperative Management sets out to be different, by bridging the gap between these texts and the evolving and developing area of practice that pre operative assessment has become in modern healthcare. In order to achieve this Pre Operative Assessment & Perioperative Management has set out to deliver the core clinical aspects of practice, linked to the education and service development needs of a perioperative service. The challenge for such a book is to integrate this knowledge effectively, using the best evidence base, for use in every day practice. The brief to the contributors was to help define pre operative assessment utilising their expertise to draw out some of the leading practices and thoughts of the day. They have achieved this, ensuring that the reader has access to some of the leading experts in international perioperative practice. They have done this in an open and accessible style that will guide the reader though some complex and demanding subjects to enable them to deliver better front line care to surgical patients.

Oxford Handbook of Anaesthesia Jun 25 2019 The Oxford Handbook of Anaesthesia has been completely updated for the second edition. All chapters have been rewritten and a number of new expert authors have been brought on board. Additional new material includes anaesthesia for the critically ill, and a comprehensive section on anaesthetic risk including anaesthetic risk tables. The first section deals with preoperative issues affecting the administration of

anaesthesia. Practical advice is provided covering the impact of medical disease on anaesthesia. The second section describes practical anaesthetic techniques for surgical specialties, including most subspecialties such as thoracic and neuroanaesthesia. Separate, comprehensive sections on paediatric and obstetric anaesthesia are included. The management of emergencies arising during anaesthesia are fully covered with helpful action plans and algorithms throughout. Uncommon conditions and their management are included, and there is an extensive drug formulary and guide to infusion drugs. As with the first edition, this new edition will be the essential handbook for anaesthetists, both junior and experienced, for registrars and those sitting exams, as well as ODPs and nurses involved in theatre area work and pre-assessment. It is the one book for anyone working in anaesthesia to keep to hand at all times!

Global Anaesthesia Oct 10 2020 The Oxford Specialist Handbook of Global Anaesthesia is a key reference for anaesthetists working in environments with scarce resources. Whether due to rural locations, poverty, natural disasters, the outbreak of epidemics, or war and conflict, this handbook supports anaesthetists to practice to a high standard in challenging situations and to problem solve when faced with unusual circumstances. Practical and concise, this resource outlines how to make the most of minimal resources, from finding alternatives to typical forms of anaesthesia, to the minimum standards for the safe and effective use of equipment. Intuitively laid out, with preoperative and perioperative instructions across a swathe of sub-specialties, including obstetrics, paediatrics, burns, pain, trauma, and critical care. Written by international experts with a wealth of experience administering anaesthesia in elective and emergency settings across the globe, this essential handbook provides the definitive guide to the provision of consistently safe anaesthesia in unfavourable environments, in a portable and easy-to-read format.

Vascular Anaesthesia Jul 07 2020 Providing a practical, current, evidence-based approach to all aspects of perioperative care for the patient with vascular disease, Vascular Anaesthesia is an essential read for all vascular anaesthetists, anaesthetic nurses and anyone else involved in the care of vascular patients throughout the world. Vascular Anaesthesia summarizes current knowledge, particularly on interventional procedures (radiological, diagnostic, and surgical). This book also equips the trainee anaesthetist with the scientific and clinical knowledge to pass the Final FRCA examination. It enables doctors to approach vascular surgical patients with a firm understanding of a particular procedure, particularly its risks and options for perioperative management based on current best practice. The management of the patient with vascular disease is evolving rapidly: this indispensable pocket reference is of sufficient detail to update the regular and occasional vascular anaesthetist with current best practice for particular, common clinical scenarios. The book also equips the non-anaesthetic medical, nursing, and theatre staff with knowledge and understanding of all other aspects of perioperative care.

COVID-19 Apr 03 2020 The story of COVID-19 now seems so familiar: from the first reported case of a new respiratory infection in China in December 2019, to a pandemic that rapidly changed the world. Respiratory clinicians and scientists were at the forefront of delivering healthcare for people with COVID-19, leading efforts to understand this novel virus and disease, and developing and testing strategies to better prevent and treat it. These endeavours extended not only to the acute illness, but also to understanding the longer-term consequences. The pace of knowledge acquisition was rapid but is now maturing. This Monograph therefore provides a timely and valuable state-of-the-art summary for clinicians and scientists on our understanding of this virus and its consequences to date. It is essential reading for all those involved in the care of people who are or who have been affected by COVID-19.

Emergencies in Critical Care May 05 2020 This essential handbook provides a practical, accessible guide to all emergency situations encountered in the critical care setting. Emergencies are very common in the critical care setting and this book helps critical care staff identify patients at risk, how to manage them, and be prepared. To help the reader find advice quickly, most chapters begin with a generic description of how to manage emergencies affecting that system, or patient group. This is followed by details of specific diagnoses and how they should be managed. The author team, where possible, follow the 'ABC' approach, which is not only the standard approach to emergency management, but also a widely-used scheme for documenting daily reviews on ICU, and for documenting trauma management. This second edition covers new areas of importance, including sections on how to deal with adverse events and critical incidents involving critically ill patients, patient-safety and improved patient rescue packages, and on the practicalities of infection control procedures. Normal values have been combined in to one short chapter for easy reference. Easy to use and evidence-based, this book will help all critical care staff involved with the management of emergencies, from the new junior doctor to the experienced consultant in a portable and easily-readable format.
